

First Responder Training

Electric Vehicle Safety Training

**Tuesday, November 29, 2022 @ 10 a.m. - 11:30 a.m. EST
Virtual - FREE**

Taught by Instructor Chris Womock
25+ years experience in Fire Service

This course, "First Responder Alternative Fuel Vehicle Safety Training," will address these needs by presenting how alternative fuel vehicles operate, their key components, vehicle identification techniques, immobilization procedures, firefighting and extrication, and overall safety procedures, including proper personal protective equipment. At the scene, would you know: • How to quickly identify an electric, hybrid-electric, biofuel, natural gas, hydrogen, or propane-powered vehicle? • Where the high-voltage batteries, components, and cables are located in an electric drive vehicle?
